## **Putting planfahrt on the map**

**The planfahrt modules automatic passenger counting, projections, journey time analysis and route profit & loss are currently being used by more than 150 companies. Many clients have also been won over by the benefits of the new map display module.**

There are obvious advantages to representing data in a map format. The operational data can be clearly visualized and is easily comprehensible. The connections between location, traffic situation and the impact on operational processes become apparent.

### **What can the Map Display Module accomplish?**

The Map Display Module displays evaluation results from planfahrt against a background of a digital street map or a route network. Data relating to stops and route sections are represented in the form of lines, symbols or diagrams which can be formatted in various ways.

### **Sustainable application thanks to web technology**

The Map Display Module accesses the most up-to-date web technologies. New specifications for map design and functionalities can therefore be more quickly implemented and the sustainability of the technology is thus guaranteed.
